Column Wraps

Coverage with character.

Once you've met the structural requirements of your project, Fypon® column wraps can be used to add an elegant finishing touch. Designed for easy installation around an existing structural support, column wraps are perfect for adding character to a new job or covering an outdated design.

FYPON®

Column Wraps

How to Order

Column Wraps

Fypon® column wraps are non-structural and designed to wrap around an existing treated wood post or other structural support. Square and tapered styles are available in a variety of heights and are trimmable from the bottom of the shaft up to 3". Flat-panel column wraps can be trimmed to any height.

PremiumSelect column wraps come in a complete kit that includes shaft, cap, base, installation cleat, hardware, tube of adhesive and installation materials. Installation kits for ProSelect column wraps are sold separately.

Flat-pack column wraps ship unassembled for better handling and utilization of less storage space. Choose from square and tapered styles in smooth PVC or wood-grained polyurethane.

Column Wrap Accessories

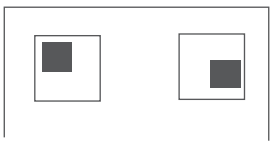
Square column wraps come semi-assembled and include a Traditional cap and base, and tapered column wraps come semi-assembled and include a Craftsman cap and base. Six additional cap and base styles are available and can be ordered separately. Caps and bases ship in four separate pieces with pre-mitered corners.

Special Order Products

PremiumSelect products shown in the catalog are available in additional sizes. Product may be modified to minimum 6" width to a 24" maximum width. The height may also be modified with a minimum height of 48" to a maximum of 144" height (maximum 108" for tapered).

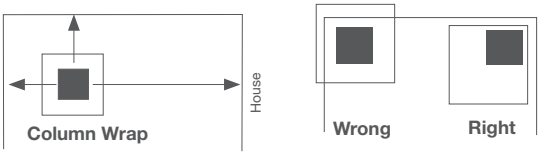
Flexible Positioning Column Wraps

The design features installation cleats on the interior or exterior of the shaft providing ample room around the support post. This allows for positioning adjustments to align several columns in a row or to allow for positioning close to the porch edge. Also, because the column wrap does not come in contact with the structural post, the integrity of the wrap is not dependent on the support.



Flexible positioning around support post.

Before you order, you'll want to measure to make sure you have enough clear distance from the support post to the edge of the porch. The needed space is dependent on the style of column. You will need more space for tapered columns than square due to the larger base.



Allow adequate distance when choosing wrap width.

Installation Kit
